

## **BRC Sewer Alignment Resampling Event**

Client – Ranajit Sahu

Owner – Basic Remediation Company

GES collected soil samples at the surface of a new sewer line trench in Henderson, Nevada. The trench crossed the TIMET property from southeast to northwest/northeast of the TIMET ponds and crossed the Spray Wheel extending to Galleria Drive. Soil samples were collected at fourteen surface locations total. The samples were analyzed for asbestos and moisture. Samples were collected immediately after the areas were scraped at the surface only.
