

# BRC Western Hook Development Sub-Area Soil Sampling

Client – Basic Remediation Company

Owner – Basic Remediation Company

GES located soil sampling points using a Trimble GPS unit. GES performed asbestos surface sampling and subsurface soil sampling at 129 sample locations. Boring location staking occurred concurrently with asbestos sampling. GES performed a USA utility clearance for the site. Following the USA clearance, 129 boring locations were drilled and sampled per the Sampling and Analysis Plan for the Western Hook Development Sub-Area Workplan.

The sample locations were photographed before sampling. Judgemental sample locations were not sampled.
