

Clark County Public Response

Client: Confidential

GES provided environmental sampling and technical guidance for the investigation of potential illegal dumping at a Treatment Storage & Disposal Facility. The site was approximately a 6 acre facility. This project was done in conjunction with Code Enforcement Division of Clark County Parks and Recreation Department, and was in ancillary support to a warrant served by Clark County District Attorneys Office.

Our scope included technical guidance and environmental sampling support of soil, debris and aqueous media as directed by Clark County Health District and Nevada Division of Environmental Protection. This was initial grab of samples from selected areas where contamination was suspect, and did not constitute a full-scale site characterization.
