

Galleria North Sub Area

Client – Basic Remediation Company

Owner - TIMET

GES was contracted to conduct a soil sampling program directed by BRC for approximately 50 locations. Sample depths were collected at most field located areas identified by the Sampling and Analysis Plan. The sampling was performed by hand and drill rig techniques. Field documentation consisted of boring logs (soil lithology), daily field reports and chain-of-custody forms.

GES located and staked 50 borings and collected asbestos samples at the surface. GES documented the drilling and sampling; maintained chain-of-custody; and prepared boring logs. The samples were shipped by Fedex Priority Overnight. GES prepared a Field Activity Report following the completion of the field work.
