

**CITY OF NORTH LAS VEGAS  
SIMMONS STREET DRAINAGE IMPROVEMENTS - FUEL REVENUE  
INDEXING  
NORTH LAS VEGAS, NEVADA**

The project involves constructing a regional flood control system, Gowan Outfall, which bisects Simmons Street between Craig Road and Lone Mountain Road. In particular, the improvements consist of excavation and installation of roadway foundation, asphaltic concrete pavement, curb and gutter, signing and striping, removal and replacement of an existing reinforced concrete box culvert to a free span bridge, street drainage improvements, relocation or extension of utility lines, and all other appurtenances related to this type of work. The Regional Flood Control facility consists of approximately 2,800 linear feet of dual 18'x6' RCB's, 1,000 linear feet of 24x6' RCB, transition structures, RCP storm drain laterals ranging from 18 inches in diameter, several drop inlets, and several manholes. There is a large box culvert in the middle of the Craig and Simmons intersection. This project was funded by Fuel Revenue Indexing.

*This project will allow the prevention of flooding which had caused significant damage to the surrounding areas in the past.*

GES is currently providing field staffing and laboratory testing for QA observation and testing during soils, aggregates, concrete, and asphalt construction. The anticipated construction schedule is 8-months. During the duration of the project, GES attends weekly project meetings as needed. GES also prepares a report summarizing our observation and testing results on a monthly basis.
